Project Design Phase-I
Solution Architecture

Date	14 October 2022
Team ID	PNT2022TMID04977
Project Name	Project – Skill and job recommender
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.

- Describe the structure, characteristics, behaviour, and other aspects of the software to project stakeholders.

- Define features, development phases, and solution requirements.

- Provide specifications according to which the solution is defined, managed, and delivered.

- Provide the best business require recommend by using the optimised and efficient algorithm

- Differentiate the fake job recommend by fake sites and be aware from the scammers
